Operational Enhancements & Feedback Intelligence Proposal

A strategic proposal to enhance interview scheduling accuracy, separate candidate vs. support feedback, introduce dual quality ratings, and establish complete candidate history dossiers.

Document Purpose: Managerial Approval & Planning	**Target Audience:** Management & Leadership
Target Platform: Tech Team Tracker (Web Console)	**Prepared By:** Technical Operations Team

1. Executive Summary

As our interview volume and tech support operations expand across North American clients, the Tech Team Tracker requires a refined operational framework. Currently, task scheduling uses generic duration estimates, candidate and internal feedback are occasionally blended, and tracking a candidate's complete multi-interview journey requires manual searching across various screens.

This proposal outlines **seven key operational enhancements** designed to eliminate scheduling ambiguities, give leadership full visibility into candidate feedback, capture two separate 5-star quality ratings upon task completion, and create an automated, centralized **Candidate History Dossier**.

2. Strategic Comparison: Current State vs. Proposed Solution

Operational Area	Current Workflow (Limitations)	Proposed Enhancement (Business Value)
Interview Scheduling	Relies on a single time and duration estimate (e.g., 30m). Exact end times and calendar overlap require mental math.	**Explicit Start Time & End Time in Eastern Time (EST).** Zero ambiguity for recruiters, TSEs, and clients.
Task Queue Display	Shows a generic 'Duration' column, which does not tell the team when an ongoing session will conclude.	**Replaces Duration with Start Time & End Time columns.** Teams can plan back-to-back technical sessions effortlessly.
Non-Interview Tasks (TAC, TQC, JDC, Demo)	Forces interview-like time fields on non-interview activities, confusing team members.	**Dedicated Start Date & End Date fields.** Clean schedule tracking for multi-day assessments and mock sessions.
Quality Assessment Upon Task Completion	Task is marked 'Done' with a single text comment. No structured internal scoring exists.	**Dual 5-Star Rating System:** 1. Interview Assessment ('How was the interview?') 2. Candidate Evaluation ('How was the candidate?')
Feedback Organization	Candidate responses and internal support notes are displayed in a single unified list, making analysis cumbersome.	**Split-Screen Two-Panel View:** Independent left-side Candidate Feedback and right-side Support Feedback with dedicated date filtering.
Candidate Journey & History	No centralized summary of how many times a candidate has been evaluated or which TSEs have trained them.	**Complete Candidate History Drawer:** Displays total interviews, count of unique TSEs assigned, companies, and historical timeline.

3. Detailed Module Breakdown

Module 1: TSM Task Creation — Separate Start & End Times (EST)

To guarantee punctuality and prevent overlapping interview commitments, the scheduling workflow for all interviews will transition from duration approximations to formal time windows.

Key Workflow Requirements:

- **Dedicated Time Pickers:** The creation and edit forms will require an **Interview Date**, a **Start Time**, and an **End Time**.
- **Business Validation:** The system will enforce that the End Time must be strictly later than the Start Time, preventing zero-length or negative sessions.
- **US Eastern Time (EST/EDT) Standardization:** All times will be captured and displayed in Eastern Time (America/New_York) with automatic Daylight Saving Time handling.
- **Task Queue Table Redesign:** The current 'Duration' column in the main Task Queue will be replaced by two distinct columns: **Start Time** and **End Time**.

Module 2: Non-Interview Task Scheduling (TQC, TAC, JDC, Demo, RUC)

A significant portion of our technical operations involves support sessions, mock evaluations, and coding reviews that are not traditional interviews. Forcing interview time requirements onto these tasks creates friction.

- **Start Date & End Date Support:** For non-interview tasks, users will specify a Start Date and an End Date, ideal for multi-day assignments.
- **Optional Execution Time:** When a specific time is needed for a session, start/end times can be provided, but they will not be mandatory unless applicable.

Module 3: Complete Candidate SAGA Feedback Transparency

Currently, candidate feedback submitted via the Candidate SAGA link is summarized. Leadership and team leads require direct visibility into what the candidate actually wrote.

- **Role-Based Access:** Upper Management, Management, Marketing Team Leads, TSM, and authorized TAC members will have full read access to raw candidate submissions.
- **Full Qualitative Data:** Authorized viewers can inspect candidate responses, interview experience feedback, ratings, and written remarks verbatim.
- **Strict Privacy Retention:** Code names and internal engineer identity protection will remain 100% active based on existing organizational hierarchy rules.

Module 4: Dual 5-Star Internal Assessment Upon Task Completion ('Done')

When an interview or support session is finalized and the user marks the status as **Done / Completed**, the system will immediately prompt the user to complete two distinct 5-star quality ratings before closing out the task.

Rating A — Support Team's Interview Assessment	**Rating B — Candidate Performance Evaluation**
Label: *'How was the interview?'*	Label: *'How was the candidate?'*
A 5-star rating evaluating the technical environment, client engagement, and overall interview flow.	A 5-star rating measuring the candidate's technical preparedness, responsiveness, and subject matter mastery.

- **Data Independence:** These two internal ratings will be stored separately and will *never* overwrite or merge with the candidate's self-submitted feedback.
- **Optional Debrief Notes:** An optional qualitative notes field will allow support staff to record critical debrief notes for future reference.

Module 5 & 6: Redesigned Two-Panel Feedback Center with Date Filters

The current Feedback page will be restructured into a **two-column split workspace** that cleanly separates what candidates reported from what internal technical support evaluated.

LEFT PANEL: Candidate SAGA Feedback	RIGHT PANEL: Internal Support Feedback
• Displays feedback submitted directly by candidates. • Includes submission date, candidate name, company, interview date, role, candidate rating, and full comments. • **Dedicated vertical scrollbar** for smooth independent browsing.	• Displays internal evaluations logged by TSM & TAC. • Includes feedback date, candidate, company, assigned TSE, Submitting lead, Interview Rating, Candidate Rating, and remarks. • **Independent vertical scrollbar**.

- **Unified Calendar & Date Filters:** A top-level date picker will allow leadership to filter both panels by a single day or a date range (From Date to To Date) with instant 1-click reset.

Module 7: Complete Candidate History Dossier (From Task Panel)

When a manager or recruiter clicks on any task in the Task Panel, the side detail drawer will now feature a comprehensive **Candidate History & Evaluation Dossier**. This answers the critical question: *'What is this candidate's full story with our team?'*

Total Interviews Attended	Unique TSEs Assigned	Companies Interviewed With	Latest Status & Date
Sum of all historical rounds	Distinct engineers involved	Target client organizations	Most recent outcome

- **Chronological Historical Timeline:** A detailed breakdown of every past task, showing interview date, company, job position, round type (TQC, RUC, JDC, TAC, Interview), and the support engineer who assisted.
- **One-Click Feedback Inspection:** Users can click on any past historical record to inspect both the candidate's self-feedback and the support team's internal ratings for that exact interview.

4. Anticipated Business Benefits & Impact

Benefit Dimension	Operational Value to NetBounce Leadership
Resource Planning	Clear Start and End times in EST ensure TSE availability is checked against real time slots, preventing double-booking and burnout.
Accountability & Quality	Mandatory dual ratings at task completion ensure that candidate technical readiness and interview quality are formally benchmarked.
Informed Decision Making	Before assigning a candidate to a premium client, Marketing TLs and TSMs can review their full dossier, past feedback, and recurring weaknesses.
Auditability & Transparency	Every interview round, TSE assignment, and evaluation is recorded with timestamps, eliminating conflicting verbal feedback.

5. Proposed Implementation Timeline & Safeguards

The proposed enhancements are architected to be **100% backward-compatible**. Existing candidate records, historical tasks, and user login credentials will remain intact with zero system downtime.

Phase	Key Milestones & Deliverables	Estimated Duration
Phase 1: Scheduling Core	Start/End times in EST, non-interview date ranges, and Task Table column updates.	1 - 2 Business Days
Phase 2: Dual Rating Engine	Task Done completion workflow with Interview Assessment & Candidate Performance ratings.	1 Business Day
Phase 3: Feedback & History	Two-panel split Feedback Center and Complete Candidate History Dossier drawer.	2 Business Days
Phase 4: Testing & Sign-off	Role permission audits, cross-team verification (TSM, TL, SR, Mgmt), and deployment.	1 Business Day
